Integrate in-place repository .md files

› [Issue 29](#)

   › Repositories must move files to \docs folder

   › Then turn on github-pages for that repo as sub-folder of main doc site

   › Then find a way to "symlink" the _config.yml and _folders from main doc site
   Lines of investigation include:

      › Git Submodules

      › Git Subtrees

      › ???

      › Avoiding hard-coding separate copies in each repository
