Backup

Integrate in-place repository .md files

- › [Issue 29](#)
 - › Repositories must move files to \docs folder
 - › Then turn on github-pages for that repo as sub-folder of main doc site
 - › Then find a way to “symlink” the _config.yml and _folders from main doc site
Lines of investigation include:
 - › Git Submodules
 - › Git Subtrees
 - › ???
 - › Avoiding hard-coding separate copies in each repository
