

# Logging

v.0.1

Here is a proposal:

## General logging idea:

One can set up an external logging tool like Redis to support logging.

Naming conventions for streams:

**General logs: Standard output and system logs. Produced while system is up and never purged.**

EVE instance having <UUID> will produce the following logs

LOGS\_EVE\_<UUID>

INFO\_EVE\_<UUID>

...\_EVE\_<UUID>

~~ADAM instance having <UUID> will produce the following logs~~

~~LOGS\_ALL\_ADAM\_<UUID>~~

~~...\_ALL\_ADAM\_<UUID>~~

**Customized logs: Logs that are triggered by explicit commands to Adam.**

LOGS\_TEST\_<TEST\_ID>

INFO\_TEST\_<TEST\_ID>

**Message map:**

version: 1

object: <binary data>
