Reporting Issues

Reporting of bugs and features are managed using GitHub Issues. If you are not familiar with GitHub Issue, follow the documentation on Creating an issue - GitHub Docs.

Implementations of FIDO Device Onboard (FDO) Specification is hosted at https://github.com/secure-device-onboard. Use following steps to file issues encountered with these implementations.

How to file a bug

1. Identify the repository that is best related to current issue and switch to the identified repository.
2. Click on "Issues" tab and use the search field to find existing issues.
3. If you find a matching issue, add comment to it based on your findings.
4. File a new issue if the issue hasn't yet been reported using *Bug Report* template.
5. Please ensure to provide as much details as possible while filing the issues.

How to request for new feature

1. Follow above steps to check if there is a duplicate issue raised for this feature. For new features, file an issue using *Feature request* template.

General discussion

You may also discuss issues in Slack using the Secure Device Onboard Help and General channels.
