

# Fledge

## Status

- **Current Project Stage:** Stage 2 - Growth
  - **Website:** <https://www.lfedge.org/projects/fledge/>
  - **Wiki:** [Fledge Home](#)
  - **TAC Sponsors:** [Bill Hunt](#) (Dianomic) and [Daniel Lázaro Cuadrado](#) (OSIsoft)
- 
- Originally applied under the name FogLAMP. Final Open Source Project Name: Fledge.
  - Presented during the Wednesday, May 15 TAC call: Meeting Recording (<https://zoom.us/recording/share/W1uvEbNhqYh34ZWMNheFJB5xJrVAPqtVZwPH9zalw2uwlumekTziMw>)
  - TAC supermajority approval reached on June 21, 2019.
  - Governing Board Strategic Planning Committee approval reached on June 27, 2019.

## Project Proposal - Project Introduction:

| Required Information                                                       | Responses (Please list N/A if not applicable)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Name of Project                                                            | FogLAMP                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Project Description (what it does, why it is valuable, origin and history) | <p>What does FogLAMP do?</p> <p>FogLAMP is an Industrial Internet of Things (IIoT) open source project and an essential Fog Computing component. FogLAMP uses a pluggable modular architecture to easily connect any/all sensors, machines and IIoT devices, manage their data and forward it to historians (like OSIsoft's PI), enterprise systems and the cloud.</p> <p>Why it is valuable?</p> <p>FogLAMP's modern architecture eliminates the expensive proprietary DCS, PLC, SCADA, sensor silos that make integrating and analyzing data from multiple systems so difficult for industrial manufacturers and plants. By using a consistent set of RESTful APIs to develop, manage and secure all your IIoT applications, FogLAMP is the vendor unifying solution. Developers and operators no longer face complexity and fragmentation issues when building their IIoT applications as they gather and process more sensor data to automate and transform business.</p> <p>Origin/History?</p> <p>The company Dianomic was conceived by Pat Kennedy (OSIsoft) and Dave Mount (Kleiner Perkins) then founded by Bill Hunt and Tom Arthur in 2017. Dianomic believes that existing software solutions do not meet the needs of today's IIoT developer for building fast, easy, scalable, secure systems from sensors to clouds for industrial applications and data.</p> |
| Statement on alignment with Foundation Mission Statement                   | <p>Create a unified community for Open Source Edge that:</p> <ul style="list-style-type: none"><li>• fosters cross-industry collaboration across IOT, Telecom, Enterprise and Cloud ecosystems</li><li>• enables organizations to accelerate adoption and the pace of innovation for edge computing</li><li>• seeks to facilitate harmonization across LF Edge projects</li></ul> <p>FogLAMP is conceived, architected and licensed to "create a unified open source community for edge computing". Specifically, FogLAMP is focused on the industrial edge found in manufacturing and plant operations with a go-to-market focus starting with "Process Manufacturing" including industries like oil and gas, energy, pharma, transmission -distribution, water and waste. The architecture has the developer in mind using microservice modularity and plugins for quick adoption. Developers familiar with Python or C should be able to rapidly learn, utilize and contribute to FogLAMP.</p>                                                                                                                                                                                                                                                                                                                                                                            |

| High level assessment of project synergy with existing projects under LF Edge, including how the project compliments /overlaps with existing projects, and potential ways to harmonize over time. Responses may be included both here and/or in accompanying documentation. | FogLAMP is working closing with Zededa and project Eve. We also see many opportunities with Akraino since our verticals are starting to roll out 5G and private LTE networks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |               |  |         |          |         |                 |                                                                                                 |               |           |         |     |                   |                       |     |            |                                                   |            |         |  |     |           |            |            |          |                                                 |      |             |  |     |             |  |     |         |  |            |               |  |            |         |  |      |       |  |     |      |  |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|--|---------|----------|---------|-----------------|-------------------------------------------------------------------------------------------------|---------------|-----------|---------|-----|-------------------|-----------------------|-----|------------|---------------------------------------------------|------------|---------|--|-----|-----------|------------|------------|----------|-------------------------------------------------|------|-------------|--|-----|-------------|--|-----|---------|--|------------|---------------|--|------------|---------|--|------|-------|--|-----|------|--|-----|
|                                                                                                                                                                                                                                                                             | EdgeX and FogLAMP seem to have overlap from a feature perspective but we are not sure how much exists from a market perspective. In industrial plants, control systems (SCADA, PLCs, DCSs, CNC, etc) are very secure and expensive systems. Their life expectancy is measured in decades. For this reason, FogLAMP avoids control features similar to brown field historians. EdgeX has extensive control features so it is likely focused on markets where data mgt and integrated control are required                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |               |  |         |          |         |                 |                                                                                                 |               |           |         |     |                   |                       |     |            |                                                   |            |         |  |     |           |            |            |          |                                                 |      |             |  |     |             |  |     |         |  |            |               |  |            |         |  |      |       |  |     |      |  |     |

| Does the project have a Core Infrastructure Initiative security best practices badge?<br>(See: <a href="https://bestpractices.coreinfrastructure.org">https://bestpractices.coreinfrastructure.org</a> ) | No |
| Any additional information the TAC and Board should take into consideration when reviewing your proposal?                                                                                                | No |

## Stage 1: At Large Projects (formerly 'Sandbox')

| Criteria                                                                                               | Data                                          |
|--------------------------------------------------------------------------------------------------------|-----------------------------------------------|
| 2 TAC sponsors to champion the project & provide mentorship as needed                                  | Bill Hunt, Dianomic<br>Daniel Lazaro, OSIsoft |
| A presentation at an upcoming meeting of the TAC, in accordance with the project proposal requirements | Presented on May 15, 2019                     |
| Adherence to the Foundation IP Policy                                                                  | Ok                                            |
| Upon acceptance, At Large projects must list their status prominently on website/readme                | Ok                                            |

### Project Proposal - Taxonomy Data:

### Functions (Provide, Consume, Facilitate, or N/A; Add context as needed)

| Functions                         | (Provide, Consume, Facilitate, or N/A; Add context as needed)                                                     |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------|
| APIs                              | Provide, Consume, Facilitate - Microcontroller Example - South Microservice ( <a href="#">esp8266</a> )           |
| Cloud Connectivity                | Provide, Consume and Facilitate - <a href="#">North repos</a> , <a href="#">GCP</a> , <a href="#">OSI-OMF</a>     |
| Container Runtime & Orchestration | Consume - ( <a href="#">debian</a> , <a href="#">rpm</a> , <a href="#">docker</a> , <a href="#">Project Eve</a> ) |
| Data Governance                   | Provide and Facilitate - Auditing logs and asset tracking.                                                        |
| Data Models                       | Provide, Consume and Facilitate                                                                                   |
| Device Connectivity               | Provide, Consume and Facilitate                                                                                   |
| Filters/Pre-processing            | Provide and Facilitate                                                                                            |
| Logging                           | Consume                                                                                                           |
| Management UI                     | Provide, Consume and Facilitate                                                                                   |
| Messaging & Events                | Provide, Consume and Facilitate                                                                                   |
| Notifications & Alerts            | Provide, Consume and Facilitate                                                                                   |
| Security                          | Provide, Consume and Facilitate                                                                                   |
| Storage                           | Provide, Consume and Facilitate - Buffering                                                                       |

### Deployment & Industry Verticals (Support, Possible, N/A; Add context as needed)

| Deployment Type                          | (Support, Possible, N/A; Add context as needed) |
|------------------------------------------|-------------------------------------------------|
| Customer Devices (Edge Nodes)            | Support                                         |
| Customer Premises (DC and Edge Gateways) | Support                                         |

|                                      |          |
|--------------------------------------|----------|
| Telco Network Edge (MEC and Far-MEC) | Possible |
| Telco CO & Regional                  | Possible |
| Cloud Edge & CDNs                    | Possible |
| Public Cloud                         | N/A      |
| Private Cloud                        | N/A      |

## Deployment & Industry Verticals ( or X; Add context as needed)

| Directly applicable Industry/Verticals use cases                                                                                                         | ( or X; Add context as needed)            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|
| Automotive / Connected Car                                                                                                                               | X                                         |
| Chemicals                                                                                                                                                |                                           |
| Facilities / Building automation                                                                                                                         |                                           |
| Consumer                                                                                                                                                 | X                                         |
| Manufacturing                                                                                                                                            | - Production deployments                  |
| Metal & Mining                                                                                                                                           | - PoCs                                    |
| Oil & Gas                                                                                                                                                | - PoCs                                    |
| Pharma                                                                                                                                                   | - PoCs                                    |
| Health Care                                                                                                                                              | X                                         |

| Water Utilities                                                                                                                                          | - PoCs                                    |
| Security / Surveillance                                                                                                                                  | X                                         |
| Retail / Commerce (physical point of sale with customers)                                                                                                | X                                         |
| Other - Please add if not listed above (please notify <a href="mailto:TAC-subgroup@lists.lfedge.org">TAC-subgroup@lists.lfedge.org</a> when you add one) |                                           |

## Deployments (static v dynamic, connectivity, physical placement) - ( or X; Add context as needed)

| Use Cases                                                                                                                                                          | ( or X; Add context as needed) |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| Gateways (to Cloud, to other placements)                                                                                                                           |                                |
| NFV Infrastructure                                                                                                                                                 | X                              |
| Stationary during their entire usable life / Fixed placement edge constellations / Assume you always have connectivity and you don't need to store & forward.      | X                              |
| Stationary during active periods, but nomadic between activations (e.g., fixed access) / Not always assumed to have connectivity. Don't expect to store & forward. | X                              |

|                                                                                                                                         |  |
|-----------------------------------------------------------------------------------------------------------------------------------------|--|
| Mobile within a constrained and well-defined space (e.g., in a factory) / Expect to have intermittent connectivity and store & forward. |  |
| Fully mobile (To include: Wearables and Connected Vehicles) / Bursts of connectivity and always store & forward.                        |  |

Compute Stack Layers and Cloud Stack Layers (architecture classification) - (Provide, Require, or N/A; Add context as needed)

| Compute Stack Layers | (Provide, Require, or N/A; Add context as needed) |
|----------------------|---------------------------------------------------|
