2022-09-29 Meeting notes

Date

29 Sep 2022

Attendees

- Kathy Giori
- Erik Nordmark
-
- Avi Deitcher
- Roman Shaposhnik
- Milan Lenco
- Tina Tsou

Goals

- Petr: BaseOS image version currently fetched by controller via image display name – should we instead store the baseOS version in the baseOS API explicitly? any downsides? controller will need to do old way and new way for a while
- Roman: governance discussion, community roles refresh

Discussion items

Time	Item	Who	Notes
10 min	BaseOS	Petr	Move forward with proposal
10 min	governance	Roman	no objections to mailing list proposal
10 min	LF lab	Roman/Tina	what resources are a for EVE to use, and how do we request these resources? "Equinix Open Source" - Roman says those are big (expensive) servers. But Tina says for these links we don't have to pay: https://www.arm.com/solutions/infrastructure/works-on-arm https://metal.equinix.com/ecosystem/oss/ And this catalog is for any applications of LF Edge: LF Edge Catalog (https://wiki.lfedge.org/display/LE/LF+Edge+Catalog)
10 min	services proposal	Petr	start apps as services, so that which ones start can be configurable (minimize size of rootfs image) avoids potential security issues as well, but enables user to deploy innovative services if desired (configurable) need to further discuss how to enable debug and edgeview style services as configured by the controller

Action items

- ☑ Contact existing TSC members, especially inactive ones, and refresh with active members - Roman Shaposhnik with help from Kathy Giori if needed
- ☑ Need more use case and workflow information for storage proposal - Kathy Giori to poke proposal contributors
- ☐
