● JavaScript  ⚖ CC-BY-4.0  ⑂ 56  ☆ 29  ⊙ 22 (1 issue needs help)  ⇅ 0  Updated 3 days ago

- One issue closed since last meeting: Broken Links
- No feedback on video, so will continue in same direction with edits, bumper

## Discussion items

- How do/we want to integrate Feature Requests into documentation?
- Downstream documentation at last check is diverging, and only eight pages were re-used.
  - At this point, should we focus re-usability on source content alone and not on markdown docs?

- - - Would like to see if we can share personas and user journey, how do we validate?
        - Developers creating and publishing service definitions, deployment policies, specifying ontology (properties)
        - Hub Administrator installing and maintaining installations, loading vouchers, creating users and organizations
        - DevOps staff integrating OH deployments into their automation pipelines
  - Collect data on docs usage and feedback
    - Integrate metrics
    - provide simple feedback ... initially thumbs up or down?  Text box to explain in a few words why +1 or -1?
  - Anything else?

## Action items

- [x] 19 Jul 2023 Notify David Hudson about Feature Requests slotting into a Roadmap, linking to docs

- [ ] Add personas to GitHub wiki or discussions or both
