

# LF Edge Sandbox

## About the LF Edge Sandbox

The LF Edge Sandbox is a free SaaS service provided by LF Edge and ZEVEDA that can be used to manage applications on your edge hardware. This service enables users to experience secure management and scalable application deployment of edge nodes running project EVE software. Once EVE-OS edge devices are registered to the LF Edge “EVE controller” sandbox, you can deploy other LF Edge applications (projects) from the global marketplace combined with any application you upload to your private marketplace.

The LF Edge Sandbox is provided to help developers quickly learn about open-source projects. By making projects simple to deploy, developers can focus on the value the solutions deliver. The Sandbox is ideal for building POCs, demos, and other experiments. With best-effort support from the community, it's not to be used for production installations.

With the LF Edge Sandbox, you can quickly:

- [Create a free account](#).
- [Sign in](#) and select from a list of LF Edge projects you want to deploy.
  - Optionally add your applications to the deployment list.
- Onboard your edge node running EVE software.
  - Learn more about [hardware support](#) and edge nodes.
- Software is automatically deployed, applications bootstrapped, and ready for testing.

Ready to go? See our [Getting Started documentation](#).

## Acceptable Usage Policy
