Hardware

You will need an edge node to interact with the LF Edge Sandbox. There are few options:

1. Bring your qualified device

The Sandbox includes a default set of supported hardware devices that can quickly be provisioned. We recommend selecting one of these devices to accelerate your time to application deployments. You can find this list of devices in the Sandbox GUI:

> Marketplace > Models > Global Models (tab)

If you own a device that is not on this list, please see the options below.

2. Reserve an LF Shared Community Lab system.

Coming soon

3. Load EVE-OS on a new device.

Project EVE-OS is designed to run on many different hardware architectures and platforms. Please visit the Project EVE wiki to learn more or Github to get hands-on.

Controlling Organization

The LF Edge Sandbox controlling organization is the LF Edge TAC, which determines the catalog of Global Marketplace Hardware models.

Need Help?

Please see our support page for help resources.

About the LF Edge Sandbox

The LF Edge Sandbox is a free SaaS service provided by ZEDEDA that interoperates with your edge hardware running project EVE. This service interacts with edge nodes running project EVE software. Once associated, you can deploy other LF Edge projects from the global marketplace combined with any application you upload to your private marketplace.
